1. Purpose of this Manual

This manual explains how to use the main areas of the Akhani Connect system. It is written for day-to-day users who need to understand how to log in, complete their tasks, navigate each role dashboard, and understand the verification and reporting workflows available in the system.

The document focuses on the current project build and reflects the role-based flows that have already been implemented in the Laravel application.

2. About Akhani Connect

Akhani Connect is a South African platform that combines recruitment management and procurement verification. It allows different groups of users to work in one controlled environment while seeing only the tools and records relevant to their roles.

- Candidates register, verify identity, complete profiles, upload documents, search jobs, and apply for vacancies.
- Recruitment users create and manage jobs, review applicants, and manage candidate-related workflow.
- Procurement users complete identity and company verification tasks and upload supporting records for review.
- Client users inspect procurement records, review verification progress, and send follow-up communication.
- Superadmin users manage the platform, users, settings, verification logs, analytics, and reporting.

3. User Roles and Responsibilities

3.1 Superadmin

- Manage system users across all supported roles.
- Create and manage client accounts.
- Review platform verification logs and overall activity.
- Access reporting, analytics, settings, and supervision dashboards.
- Review procurement and candidate detail records from an oversight perspective.

3.2 Candidate

- Verify South African identity before full dashboard access.
- Complete personal and professional profile information.
- Upload CVs, qualifications, and supporting documents.
- Search and review open jobs.
- Submit job applications and monitor application progress.

- Verify driver licence where required.

3.3 Recruitment

- Verify identity before entering the main dashboard.
- Maintain recruiter profile information.
- Create, edit, publish, and delete job posts.
- Review candidates and applications.
- View uploaded candidate and application documents.
- Communicate with applicants where necessary.

3.4 Procurement

- Verify South African identity before entering the procurement workflow.
- Complete personal profile details.
- Verify company enterprise details from the external API using registration number only.
- Verify enterprise directors using director ID numbers.
- Verify driver licence through image upload and API workflow.
- Upload supporting procurement documents for review.
- Download enterprise and director reports as PDF documents.

3.5 Client

- Verify identity before accessing the client dashboard.
- Review procurement users and their verification records.
- Search and filter procurement records.
- Download enterprise, director, and procurement reports.
- Download procurement user documents where access is granted.
- Send follow-up notifications to procurement users.

4. Logging In and Accessing the System

1. Open the Akhani Connect web address provided to you.
2. Enter your registered email address and password.
3. Click the login button to continue.
4. If your account role requires identity verification and it has not yet been completed, you will be directed to the verification flow before full access is granted.

The login screen also provides a registration option for Candidate, Recruitment, and Procurement users. Client users are created by Superadmin and do not self-register.

5. Password Reset and Account Recovery

1. On the login page, click the Forgot Password link.
2. Enter the email address linked to your account.
3. Submit the form to request a reset link.
4. Open the reset email and use the provided link to create a new password.
5. Return to the sign-in screen and log in with your updated password.

Note: Make sure the email address exists in the system. If the email does not exist, the reset will not be completed.

6. Identity Verification Rules

Identity verification is a system-wide control used to protect sensitive areas of the application. For Candidate, Recruitment, Procurement, and Client roles, access to key dashboard areas is blocked until a valid identity verification has been completed.

- Identity verification records are stored in the database.
- A verified ID number can be used to populate the user profile automatically.
- Where the system displays a verified ID number, it may be locked from user editing.
- Users who are not verified may see alerts or popups explaining that verification is required before they can continue.

7. Common Navigation

The system uses a role-based side navigation and a shared header area.

- The side navigation changes by role and shows only the tools available to that user.
- The header shows the current account role and verification status.
- The profile area allows users to update account details, upload a profile photo, and view their contact information.
- Notifications can be opened from the shared navigation area where enabled.

8. Profile Management

Most users can access a shared account profile area, while some roles also have role-specific profile forms.

- Users can update their basic personal information such as name, surname, phone number, and other general profile fields.
- Users can upload a profile picture.
- Where a field is sourced from a verified record, such as a verified South African ID number, the system may display it as read-only.

- Procurement and other role-specific profiles may contain additional workflow-driven information.

9. Candidate User Manual

9.1 Candidate registration

1. Open the registration screen.
2. Select the Candidate registration type.
3. Enter first name, surname, email, phone number, and password.
4. Submit the registration form.
5. Open the welcome email if required, then log in to continue.

9.2 Candidate dashboard

The candidate dashboard is designed around onboarding cards. These cards guide the user through identity verification, personal details, document uploads, and driver licence verification.

- SA ID Verification contributes to dashboard readiness.
- Personal Details contributes to dashboard readiness.
- Documents Upload contributes to dashboard readiness where configured.
- Driver Licence is available as a supporting verification task and does not affect the overall candidate progress score.

9.3 Completing candidate profile details

Candidates can complete profile and career-related details for recruiter review. This may include notice period, relocation preference, job industry, employment type, salary expectations, education level, education details, certifications, work experience, and skills.

9.4 Uploading candidate documents

1. Open the Candidate Documents section.
2. Choose the relevant document type or category.
3. Upload the file using the provided upload control.
4. Save the document and confirm that it appears in the uploaded documents list.

Typical candidate documents include CVs, qualifications, certificates, and driver-related documents.

9.5 Driver licence verification

1. Open the Driver Licence Verification screen.
2. Upload the front of the licence image.
3. Optionally upload the back of the licence image.
4. Submit the verification request.

5. Review the uploaded files and verification history on the same page.

9.6 Searching and applying for jobs

1. Open the Jobs section from the candidate dashboard.
2. Search or browse available jobs.
3. Open a job to review full details.
4. Click the apply action on a suitable job.
5. Confirm the application submission and review the application list to track progress.

10. Recruitment User Manual

10.1 Recruitment registration and verification

Recruitment users can self-register and then complete identity verification before accessing the main recruitment dashboard.

10.2 Recruitment dashboard

The recruitment dashboard provides access to jobs, applications, candidate records, and recruiter profile management.

10.3 Managing recruiter profile

Recruitment users can update their account and profile details in the profile section before moving into day-to-day operations.

10.4 Creating a job post

1. Open the Recruitment Jobs area.
2. Click Create Job.
3. Enter the job title and required job information.
4. Select the relevant province from the province dropdown list.
5. Select the job type such as permanent or contract.
6. Set or edit the published date as required.
7. Enter the job description using the WYSIWYG editor.
8. Save the job post.

10.5 Editing or deleting a job

1. Open the jobs list.
2. Select the Edit option to update an existing job.
3. Update the fields and save the changes.
4. Use the Delete action for a job that must be removed.

Note: Deleting a job should only be done when the job should no longer be available to candidates.

10.6 Reviewing applications and candidate documents

- Open the Applications section to view submitted applications.
- Open an application to inspect candidate information and attached documents.
- Use document links to view candidate-submitted and application-related files.
- Update application status where the workflow allows.
- Send follow-up notifications to candidates where appropriate.

11. Procurement User Manual

11.1 Procurement identity verification

Procurement users must verify their South African ID before the main procurement dashboard becomes available.

1. Open the SA ID Verification screen.
2. Enter the South African ID number.
3. Submit the verification request.
4. Wait for the response and confirm that the status changes to verified.

Note: Once identity verification succeeds, the verified ID number is stored and reused in the user profile.

11.2 Procurement dashboard and progress cards

The procurement dashboard uses verification cards to guide the user through onboarding and readiness.

- SA ID Verification is counted toward progress.
- Personal Details is counted toward progress.
- Enterprise Details is counted toward progress.
- Enterprise Directors is counted toward progress.
- Documents Upload is visible but does not affect progress.
- Driver Licence is visible but does not affect progress.

A profile summary accordion on the dashboard displays saved data for personal details, enterprise details, enterprise directors, and driver licence details.

11.3 Completing procurement personal details

1. Open the Procurement Profile section.
2. Review the auto-populated South African ID number.
3. Complete other available fields such as phone, date of birth, gender, address, suburb, city, province, and postal code.
4. Save the profile.

Note: The South African ID number is sourced from the verified identity record and should not be manually editable.

11.4 Verifying enterprise details through CIPC

Enterprise verification is driven by registration number only. Users are not expected to manually capture company details.

1. Open the CIPC Enterprise section.
 2. Enter the enterprise registration number in the required format.
 3. Click Verify Enterprise or Re-verify Enterprise.
 4. Wait for the API response.
 5. Review the read-only company details shown on the page.
 6. Download the enterprise report as PDF when needed.
- Enterprise data pulled from the API is saved to the database.
 - Enterprise fields should be displayed as read-only after verification.
 - Users can re-verify to refresh enterprise data where needed.

11.5 Verifying enterprise directors

Enterprise directors are verified one by one using director ID numbers.

1. Open the Enterprise Directors section.
 2. Enter the director ID number.
 3. Save or verify the director entry.
 4. Review the director data displayed in the detailed accordion layout.
 5. Download the director PDF if a formal export is needed.
- Director verification results are saved in dedicated database columns.
 - Director detail views group information in a readable format rather than exposing raw payload data.
 - Directors should align with the linked enterprise details.

11.6 Driver licence verification for procurement

1. Open the Driver Licence Verification link from the procurement side navigation.
2. Upload the front image of the licence.
3. Upload the back image if available.
4. Submit the verification request.
5. Review the uploaded files and verification history below the form.

This module is available to procurement users in the same overall style as the candidate driver licence flow.

11.7 Uploading procurement documents

1. Open the Documents section.
2. Add a document name.
3. Choose the file to upload.
4. Submit the document.
5. Confirm that the file appears in the uploaded documents table.

Uploaded procurement documents can be reviewed and downloaded by authorized client and admin users.

11.8 Verification history and re-verification

The procurement verification history screens allow users to review verification records, inspect status, and re-run verification where the workflow permits.

12. Client User Manual

12.1 Client identity verification

Client users must complete identity verification before entering the client dashboard.

12.2 Client dashboard

The client dashboard provides overview cards and data visualizations for procurement review activity.

- Summary cards show procurement users, verified users, in-progress users, and pending users.
- Charts summarize progress distribution, module coverage, and verification activity trends.
- Accordion sections summarize verification records and recent procurement activity.

12.3 Reviewing procurement records

1. Open the Procurement Records section.
2. Use available filters and search tools to find procurement users.
3. Open a procurement record for a detailed review.
4. Inspect personal details, enterprise data, directors, documents, and verification history.

12.4 Downloading reports and documents

- Download a full procurement report where available.
- Download enterprise detail PDFs.
- Download director detail PDFs.
- Download uploaded procurement documents.

12.5 Sending follow-up notifications

1. Open a procurement record.
2. Locate the follow-up or notification form.
3. Enter a subject.
4. Enter the message content.
5. Submit the notification.

13. Superadmin User Manual

13.1 Superadmin dashboard

The Superadmin dashboard provides the broadest system view and includes summary cards, analytics charts, and oversight lists.

- Summary cards show overall users, client accounts, and open verification records.
- Charts provide role distribution, verification status mix, and platform activity trends.
- Additional lists highlight recent users and verification status breakdowns.

13.2 Managing users

1. Open the Users section.
2. Review the full user list.
3. Use the Add User action to create new role-based accounts.
4. Open a user record to inspect full details.
5. Use the Edit action to update user role or status information where permitted.

13.3 Managing clients

1. Open the Clients section.
2. Create a client account where needed.
3. Capture and save the required client information.
4. Provide login credentials to the client user through the agreed communication process.

13.4 Reviewing verification logs

The Verifications section allows Superadmin users to view detailed verification records, status history, and related record context.

13.5 Reports and analytics

- Use the Reports section for administrative reporting views.
- Use the Analytics/Activity section to review user IP, browser, route, and activity data captured by the system.

- Use dashboard charts and analytics screens together to monitor adoption and verification progress.

13.6 Settings

The Settings section is intended for platform-level configuration under Superadmin control.

14. Notifications and Messaging

Notifications are used across the platform to support follow-up communication.

- Welcome emails are sent to eligible self-registering users.
- Password reset emails support account recovery.
- Recruitment users can send messages related to applications.
- Client users can send follow-up messages to procurement users.

15. Reports and PDF Downloads

- Procurement enterprise details can be downloaded as PDF.
- Procurement director records can be downloaded as PDF.
- Client users can download procurement-related reports and files.
- Superadmin users can open procurement reporting views for oversight.

16. Data Entry Rules and Important Controls

- Do not manually change fields that are populated from verified API data.
- Use re-verification instead of manual correction where verification modules are designed to refresh external data.
- Where dropdowns are provided, such as province selections, choose from the predefined values only.
- Gender selections should follow the configured role forms.
- Document uploads should use meaningful names where the interface provides a document name field.

17. Common Troubleshooting Guidance

17.1 I cannot access my dashboard

- Confirm that your identity verification has been completed.
- Confirm that your account has the correct role.
- Confirm that you are using the correct email address and password.

17.2 A verification request failed

- Check the number entered, such as an ID number or enterprise registration number.

- Check whether the uploaded file meets the expected image format and size requirements.
- Use the re-verify or retry option where available.
- Escalate to Superadmin if the failure persists and requires technical review.

17.3 My PDF or document is missing

- Confirm that the relevant verification or document has actually been saved.
- Refresh the page and re-open the record.
- Confirm that your role has permission to access the file or report.

17.4 The table of contents is blank or incomplete

- Open the document in Microsoft Word.
- Click inside the table of contents.
- Choose Update Field.
- Update the entire table.

18. Recommended Operating Practice

- Candidates should complete profile information before applying for multiple jobs.
- Recruitment users should review job posts carefully before publishing them.
- Procurement users should verify identity first, then profile, then enterprise, then directors.
- Client users should review both summary status and full detailed records before making a follow-up decision.
- Superadmin users should monitor verification failures and unusual activity trends regularly.

19. Demo/Testing Accounts

Role	Username	Password
1. Procurement	procurement@akhaniconnect.co.za	Akhaniconnect!1
2. Recruitment	recruitment@akhaniconnect.co.za	Akhaniconnect!1
3. Candidate	candidate@akhaniconnect.co.za	Akhaniconnect!1
4. Client	client@akhaniconnect.co.za	Akhaniconnect!1
5. Superadmin	admin@akhaniconnect.co.za	Akhaniconnect!1

20. Closing Notes

Akhani Connect is designed to guide each role through a structured workflow while keeping verification-sensitive information controlled and reviewable. This manual should be used together with your internal process rules and any role-specific training or video walkthroughs shared by your team.

Where the live system changes over time, this manual should be updated so that user guidance always matches the active production or testing environment.
